

## **DANPALON STORAGE REQUIREMENTS**

All DANPALON polycarbonate panels must be stored flat and in a dry environment.  
All Panels stored on site must be protected from direct sunlight.  
Do not allow water to penetrate the cells, between the outer skins.

### **IMPORTANT.**

All panel cell ends must have AD 3400 anti dust / breather tape prior to being exposed to the outside elements. The aluminum end caps should be applied as soon as the erected panel width extends past 3000mm. This is to assist in the prevention of moisture and algae spore from penetration to the cell area, but at the same time allowing the continuation of natural airflow through the panels.
